Mineral and vitamin supplement for horses

Supplement designed to safely provide the recommended dose of vitamins and trace elements.

It is the product of the line that is used to supplement animals of any category that, being in good body condition, need to meet their vitamin and mineral requirements.

It is indicated as a complement to rations based on alfalfa hay and oat grain.

For weaning and foals of older age the recommendation is 500 grams per day.

In pregnant mares it is used in the last third of pregnancy at a rate of 1 kg per day.

On suckling foals, 500 gr per day are recommended as the only ration when, due to high pasture availability, the growth rate is such that it is required to balance its mineral intake avoiding adding more proteins and energy.

Presentation: 25 Kg Poly paper Bags.
